(54) Title: **SPLIT BATTERY SUPPLY**

(57) Abstract: Headset system comprising a headset (1) for wireless communication of audio data with a communication terminal (30), said headset including a power supply unit (3), wherein a headset carrying device (40), separate from said communication terminal, comprises a charger (41) for said power supply unit. This way, low weight can be obtained for the headset, still maintaining a long battery time, by storing the headset in the headset carrying device when not used. Furthermore, the headset will not be restricted to access to, nor steal power from, said communication terminal (30). This is advantageous when the headset (1) can be used for more than one terminal, and since the terminal (30) generally can be operated also without the headset.
